

Michael Reich

Developer & UI/UX Designer

For more than 5 years I have been working in professional environments in Frontend and Backend. Primarily I work with Javascript technologies, means: Reactjs, Nodejs, Angularjs, etc..

designfunktion

Some projects

Capmatcher

Usability, Concept, Screendesign, Development Frontend and Backend

This platform was created to match investors with startups. The biggest challenges were: payment in the subscription model via Stripe, different user types with different restrictions in the platform and an extensive possibility to filter for startups.

MAN TopUsed

Screendesign, Development Frontend and Backend

In order to sell refurbished vehicles, MAN commissioned a web app to make them available on the web like Autoscout. I had the task to build the asynchronous filter in a very short time and to provide all data via an API in real time.

DentaMile Connect

Usability, Concept, Screendesign, Development Frontend

DentaMile connect is an innovative, cloud-based software for CAD/CAM production of dental appliances such as bite splints or crowns and bridges. I worked for this project in the frontend in Reactjs (Typescript) and as UX & UI designer for the user interface.

trefox

Usability, Concept, Screendesign, Development Frontend and Backend

trefox is a CRM which I developed myself for medium-sized craft businesses. Here I built the full range of a software architecture myself. The tech stack: Nextjs, Prisma, tRPC, Postgres, Nodejs, Reactjs.

React

tailwindcss

NEXT.js

Skills

Frontend

React.js
Angular.js
Vue
Svelte
Tailwind
Typescript

Backend

Next.js
Express
Node.js
Mongodb
Postgres
Tauri
Ionic
Electron

Design

Sketch
Adobe XD
Figma

UX

Persona
Userflow
User Testing

CMS

WordPress
Contentful
Storyblok
Craft CMS
Shopify

Tools

Git
Jest
Cypress
Docker
Puppeteer
